AI agents for code and dependency fixes

Agent pull request checklist, code and dependency fixes

[ ] Link to the finding and the scanner that raised it
[ ] What changed, in one sentence, and the version moved from and to
[ ] Why this urgency: which advisory or rating the agent used
[ ] Whether the vulnerable code path is reachable in this repository
[ ] Build and test results, with the run link
[ ] Rescan result after the change, from the scanner not the agent
[ ] Agent name, version and model; the session log link
[ ] Reviewer name and decision, with the time
[ ] How to revert, and which services deployed the change
